PROFESSIONAL SUMMARY

Full Stack Developer who loves building things that actually work—from AI/ML models to real-time systems, specialized in the MERN stack, dive into system-level programming when performance matters, and enjoy turning complex problems into clean code. Thrive when leading teams, fast learner, clear communicator, and always curious about the next challenge.

TECHNICAL SKILLS

Programming	C, C++, Python, Java, JavaScript, PHP, HTML
Web Development	MERN Stack (MongoDB, Express.js, React.js, Node.js), Next.js, TypeScript, REST APIs, WebSockets
AI & ML	MCP, LangChain, Deep Learning, RAG, FAISS CNNs, TensorFlow, Model Quantization, n8n
Operating Systems	QNX, POSIX APIs, Linux Kernel & Driver Programming
Databases	SQL, MongoDB
Tools	Git, Docker, Notion, Jira, Salesforce

PROFESSIONAL EXPERIENCE

- Software Engineer, Amdrodd Technologies** Jan 2026 – Present
 - **AI Automation:** Built specialized AI agents to search profiles and predict risks using historical data.
 - **Telegram Ai Agent:** Specialized AI agents to collect lead data into salesforce applicaiton conveniently.
- MERN Stack Developer, Datahex Digital Solutions** Nov 2024 – 2026
 - **School Management System:** Built a MERN app managing mentors, students, finances, and diaries across schools.
 - **Gamified LMS With Chat:** Built backend/admin panel for materials, payments, mentors, teams, notifications, scoring and complete chat functionalities with multimedia support and edit delete features. Integrated Firebase notifications and payment gateways.
 - **AI-Powered Event Management:** Contributed in MERN platform with speaker/session management, badge builder, WhatsApp campaigns, and AI agent integration. Implemented vector-based recommendations and search via MongoDB.
 - **Live Transcription & Translation (Next.js):** Developed multilingual real-time system using various providers and WebSockets.
 - **Visa & Finance Systems:** Built Node.js + React apps for visa workflows and finance tracking.
 - **Photo Retrieval & Exhibitor Apps:** Next.js systems for facial-based photo retrieval and event exhibitor dashboards.
- Software Engineer, Acsia Technologies** Jul 2023 – 2024
 - Optimized QNX RTOS for improved boot time, memory usage, and CPU performance.
 - Contributed to Adaptive AUTOSAR applications and performance tuning.
 - Developed Android Infotainment apps with Mapbox SDK and system service integration.
 - Worked on Linux Audio drivers, POSIX APIs, and kernel-level programming for embedded stability.

PERSONAL PROJECTS

- **WhatsApp AI Agent:** Multi tenant project to automate workflow using the WhatsApp Cloud API integrated with Notion, Google Sheets, Calendars, Gmail, Gemini (via LangChain,langGraph nodejs) and n8n for dynamic task execution. Redis Bullmq for handling large requests.
- **Knowledge AI System:** Implemented a Retrieval-Augmented Generation (RAG) pipeline using Gemini on a structured SQL knowledge base for context-aware question answering.
- **EcoCart (E-Commerce App):** Full MERN stack e-commerce platform with cart management, Razorpay integration, and admin dashboard for product and order management.
- **BHP Detection System:** CNN-based image classifier integrated with Node.js, WhatsApp API, and React.js frontend for real-time notifications.
- **Music App:** MERN-based web music player supporting playlist creation, search, and real-time song streaming.
- **Interview Scheduler (Django):** Full-stack scheduling system for candidates and interviewers with HR dashboard and status tracking.
- **Career Website:** PHP + MySQL job portal enabling employer listings, candidate applications, and admin management.
- **Other MERN Projects:** Resort Booking Application, Weather App, Music App, Expense Tracker,.
- **IOT Projects:** Arduino-based Party Light Automation, Piano Project

ACHIEVEMENTS

- **Conducted** – A hackathon for social good.
- **1st Prize** – Decipher Hackathon.
- **4th Rank** – VAIGA Agri Hackathon (Govt. of Kerala, Ministry of Agriculture).
